Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/31/07 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10 and 11 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Valdez (US 4,685,477). Valdez discloses cigar or cigarette holder capable of receiving a cigar or cigarette and for filtering smoke generated from the cigar or cigarette. The holder has three chambers. The first chamber defined by the space between a perforated tubular member, concentrically situated around a perforated inner tubular member, and the inner tubular member. The first chamber is substantially filled with a filter material. The second and third chambers are within the inner tubular member, substantially coaxially aligned and separated by a wall having an aperture to transfer ash from the second chamber to the third chamber. The claimed non-combustible tubular member is deemed as element 25, which as noted in Col. 3, lines 10 made be made of porcelain, a known ceramic, which is non-combustible. Element 25 as shown in figure 3 encases the tobacco charge which is deemed as the tobacco rod 14. In regards to claim 11, the perforation 26 provide for the claimed porosity.

As noted by Valdez, the plurality of air intake spaces, perforations 26, is useful for enabling the ember end of the cigar or cigarette to burn. As the smoker puffs or draws on the primary smoke filter end of the cigar or cigarette, air may be drawn into the second and third chambers through the air intake spaces to enable the ember to burn. In this manner, sufficient air is provided for burning of the tobacco to generate smoke. Valdez teaches that varying the size and/or number of the air intake spaces to control the rate at which the ember end of the cigar or cigarette burns is possible. In this manner, the cigar or cigarette may be made to burn slower and therefore last

longer than if smoked without the use of Valdez device. Thus the perforations 26, as noted by Valdez, reduces the free-burning rate of the burning tobacco in order to increase the number of puffs from the burning tobacco charge as instantly claimed by applicant.

In view that the tubular member 25 has a certain porosity as determined by the size and number of perforations 26, the sidestream smoke is minimized when compared to a cigarette not enclosed by the tubular member 25 of Valdez.

Moreover, in view that the Valdez provides the claimed structural limitations as recited in device claims 10 and 11, it would be obvious to a person of ordinary skill in the art as noted above to have met the claimed functions.

Alternatively, Valdez inherently provides the claimed features recited in claims 10-11 by encapsulating a cigarette with glass material having a specified number of perforations and perforation size. The encapsulation of the cigarette inherently minimizes the amount of sidestream smoke and at the same time reduce the free burn rate of the cigarette, due to less air being supplied to the burning cigarette, in order to increase the number of puffs from the burning tobacco charge as instantly claimed.

Response to Arguments

Applicant's arguments filed 10/31/07 have been fully considered but they are not persuasive. Applicant argues that Valdez tube does not function in the manner claimed by the instant application.

MPEP 2114 notes the following:

While features of an apparatus may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. In re Schreiber, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997) (The absence of a disclosure in a prior art reference relating to function did not defeat the Board's finding of anticipation of claimed apparatus because the limitations at issue were found to be inherent in the prior art reference); see also In re Swinehart, 439 F.2d 210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971); In re Danly, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959). "Apparatus claims cover what a device is, not what a device does." Hewlett-Packard Co. v. Bausch & Lomb Inc., 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990) (emphasis in original)."

Applicant has not provided any structural differences between Valdez and Applicant's claimed invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Carlos Lopez/ whose telephone number is 571.272.1193. The examiner can normally be reached on Mon.-Fri. 8am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Griffin can be reached on 571.272.1189. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
